accelerometer response mode

Pulse :: Page 1 mode 10
Responds to your movement, indicating stalls, bumps or wraps!
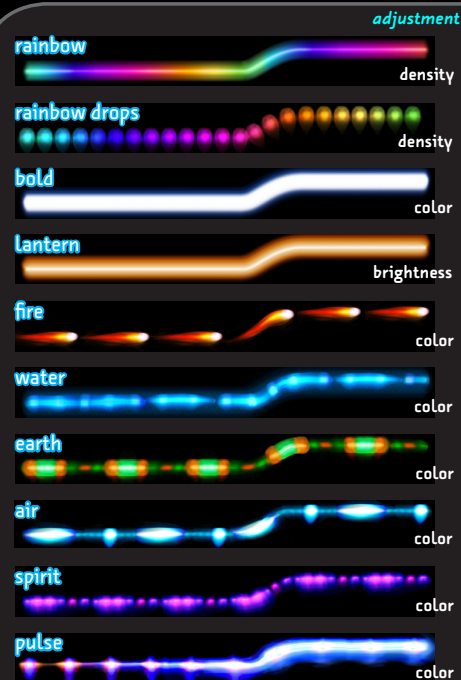

autoplay

Display all modes in a Page
• Mode11 in Pages 1-4 displays every mode on that page in sequence.
• Default timing interval between modes is ~5 seconds.
• You can adjust the timing interval with a long press. There are 5 different intervals to choose from, indicated by the number of blinks in "adjust".
   Levels 1 - 5 :: ~ 0.25, 1, 5, 15, 30 seconds
• P5m4 is a bonus mode that automatically cycles through all 30 modes with randomized adjustments. Perfect for the ultimate variety.
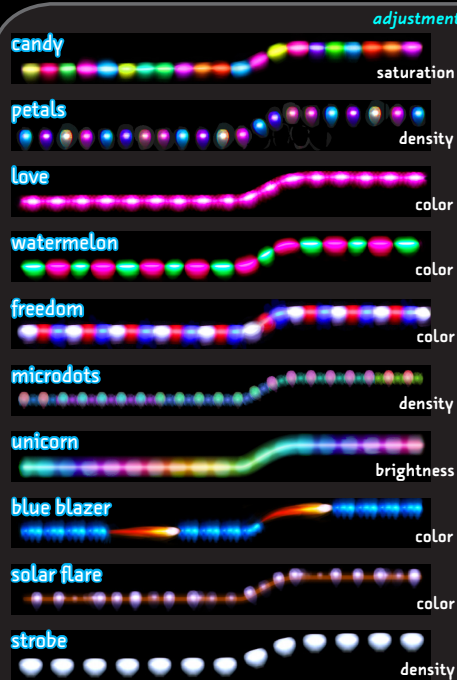

power

Check your battery charge level: From off, hold button. The light will blink its charge level color:
   Red: low || Orange: ok || Yellow: good || Green: great

Low battery mode: When the battery gets low, the light will exhibit a dim red flicker for awhile, so your light doesn't go totally dark immediately.

page 4 :: favorites :: click button 4x

• 4 quick clicks takes you to "favorites". Here you'll find your most recently saved patterns.
• Press the button to cycle through them.
• You can adjust your saved patterns.
• Saving a pattern in favorites moves it to p4m1. Use this to rearrange your favorite modes.

page 5 :: settings

• 5 quick clicks takes you to "settings".
• Each "mode" is a setting that can be adjusted.
• Settings affect the overall behaviour of the light and in most cases apply to all modes.

mode1: global brightness
mode2: global white balance
mode3: reset to factory default
mode4: autoplay adjust shuffle

How to adjust a setting:
• Most settings have 5 levels to choose from.
• Setting levels are indicated by blinks, similar to page number blinks.
• When adjusting a setting, the light will blink 1-5 times to indicate what level it is on. Press to select.

---

pages 1-4 mode 11 is autoplay :: cycle through all 10 modes on the page, and adjust the timing between modes!
