grouping

Connect 2 or more capsules

If capsule A and B are not grouped and you'd like to group them:

- Put capsule "A" into p5m1, long press to adjust, choose desired group color and press to select.
- Put capsule "B" into p5m1 and adjust.
- Select the same group color as "A" to connect A & B.
- You must adjust capsule "B" to connect.
- Save the grouping, or it will be temporary and revert to previous grouping after turning off.
- Multiple separate groups of the same color can exist.

If capsule A is joining capsule B's group:

- Similar to above, except do NOT adjust capsule B. If you adjust, you will create a new group.

Group "white" is the "global" group and does not require connecting. All capsules in "white" group will always be in the same group - an easy way to join your friends, or coordinate an instant flash mob.

power

Check your battery charge level: From off, hold button. The light will blink its charge level color:
Red: low || Orange: ok || Yellow: good || Green: great

Low battery mode: When the battery gets low, the light will exhibit a dim red flicker for awhile, so your light doesn't go totally dark immediately.

Welcome to capsule 2.0

and the start of a whole new paradigm in LED props with flowtoys connect technology.

Keep this pocket guide handy to help you navigate the amazing new features in your capsule 2.0.

Thanks to USB firmware update-ability, we will be continuing to improve capsule 2.0 programming and features.

liquid sugar	density
rainbow dash	density
fireball	color
froth	color
jammin'	color
bolder	color
sunset	color
daybreak	color

page 4 :: favorites

- 4 quick clicks takes you to "favorites". Here you'll find your most recently saved patterns. You can save up to 60 modes!
- Press the button to cycle through them.
- To delete a favorite, hold past save until you see 5x red flashes, then let go.
- You can create looks and scenes by saving adjustments within favorites to individual capsules.

page 5 :: settings

- Each "mode" is a setting that can be adjusted.
- Settings affect the overall behaviour of the light and in most cases apply to all modes.

mode1: grouping
mode2: global brightness
mode3: global white balance
mode4: reset to factory default
mode5: autoplay adjust shuffle

How to adjust a setting:

- Most settings have 5 levels to choose from.
- Setting levels are indicated by blinks, similar to page number blinks.
- When adjusting a setting, the light will blink 1-5 times to indicate what level it is on. Press to select.

---

pages 1-4 :: last mode is autoplay :: cycle through all the modes on that page, and adjust the timing between modes!
